

## Products, Technologies, Markets and Opportunities in Ophthalmology Surgical, Diagnostic, Device and Drug Markets Worldwide, 2007

- 330 pages
- 199 Exhibits
- 103 Company Profiles
- November 2006
- Report #G125

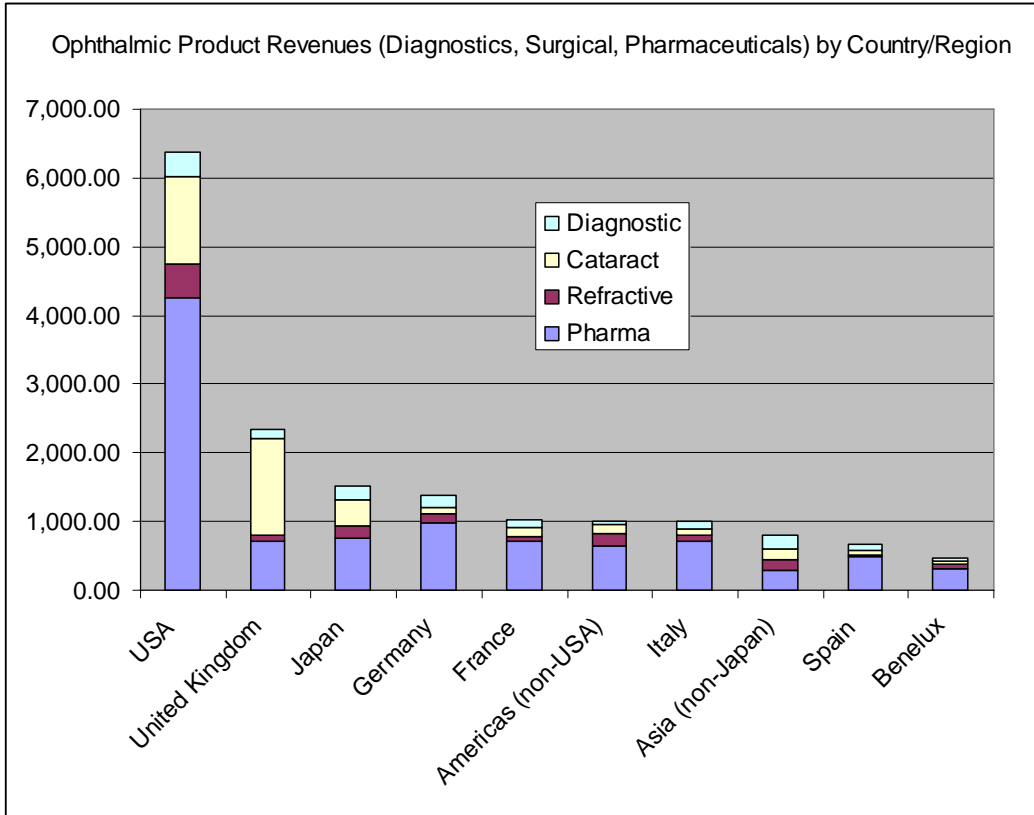

*Worldwide report on products, trends, competitors and markets for vision disorders.*

This report details worldwide the incidence and prevalence by country/region of vision disorders (myopia, hyperopia, presbyopia, glaucoma, cataracts and retinal disease), and details the current and projected market for diagnostic and therapeutic products in the management of these vision disorders, including general vision diagnostics, diagnostics for glaucoma, corneal and retinal disorders, and therapeutic options for these disorders including use of pharmaceuticals, surgery and devices. The report details current products and technologies in use and the status of development of novel products under development. The report details the clinical and technology developments underlying this huge and evolving worldwide market, with data on products in development and on the market; market size and forecast (2004-2012); competitor market shares; competitor profiles; and market opportunity. Separate size, growth and competitor share data are presented for the U.S., individual western European countries (UK, Germany, France, BeNeLux, Italy and Spain), Japan and other key international markets; Asia (India, Korea, Australia, Russia and China), the Americas (Canada, Mexico, Brazil) and Middle East and Africa categories. The report profiles 103 companies, with detailed product development, current positions and future outlook for major competitors, and brief profiles of smaller or more development stage companies with noteworthy novel or advanced research activities in the market.

The report establishes the market size for key international markets (as indicated above) for major technology segments as a baseline for and projecting growth in the market over a ten-year forecast. The report also assesses and projects the composition of the market (shifts in share based on technology) as technologies gain or lose relative market performance over this period.
